

Solvent-Based Contact Adhesives

3M™ produces and supplies a wide range of solvent-based contact adhesives. These adhesives are useful when you need the adhesive to become tacky and get bonded fast.

There are several ways of application:

- spreading with a filler knife
- using a roll
- using a brush
- using a spray gun.

These adhesives are ideal for bonding rubber, PVC and other flexible materials.

Type	Color	Processing time	Application	Peel strength(PIW)
1300L	yellow	to 8 min	brush, spray	52
847	brown	to 15 min	brush, knife	40
1099	light brown	to 40 min	brush, knife	31
