

Thermally Conductive Tapes

3M thermally conductive tapes are mainly used in the electronics industry for safely fixing coolers and other thermally conductive parts. 3M thermally conductive adhesive tapes with high mechanical strength have these properties:

- Outstanding thermal conductance, improved thanks to acrylic polymer
- High tack even in high temperatures
- Shock resistance
- Ageing resistance
- Printable
- Dielectric strength

Supplied as:

- 0.125 mm thick
- 0.250 mm thick
- 0.375 mm thick
- 0.5 mm thick
