

Safety Walk™ Tapes and Treads

Slip-Resistant Tapes and Treads - 3M Safety Walk™

General Purpose

Abrasive particles bonded by a tough, durable polymer to a dimensionally stable plastic film. Used on smooth, flat surfaces with heavy traffic, both for walkers and vehicles (corridors, production and storing facilities, ramps, staircases, ladders, operating galleries etc.)

Color: black, green, brown, yellow and transparent.

Coarse

Firm abrasive particles bonded by a tough, durable polymer to a dimensionally stable plastic film. Used for places where permanent slip protection is demanded, while these areas are exposed to heavy traffic and soiling (agriculture, forestry, construction industry, traffic of trucks, tractors, cranes, building vehicles).

Color: black.

Conformable

Abrasive particles bonded by a tough, durable polymer to aluminum foil. Designed for use on irregular surfaces. Conforms to the shape of the surface.

Cleanable

Ceramic round particles creating a durable surface that can be easily cleaned. For slippery surfaces (concrete, stone, wood, plastics, metal). Maintains a clean appearance without much effort.

Color: brown.

For Wet Areas - medium resilient

A medium resilient surface with a plastic granular coating. Designed for use in wet and barefoot areas. Ideal for boats and water sports equipment.

Color: black, gray.

For Wet Areas - fine resilient

Finely textured surface with plastic granular coating. Designed for use in wet and barefoot areas. Ideal for showers, bathrooms, toilets and sauna.

Color: white, transparent.
