

## Packaging Tapes

The G3 company provides a wide range of 3M™ products developed for packaging and box sealing. Each tape is characterized by its carrier, adhesive and application type. The 3M™ company produces and develops these characteristic features of tapes.

### Excellent Tapes with Solvent-Free Adhesive

Adhesive technology experts agree: The 3M™ thermoplastic solvent-free adhesive system 3M™ Hot-melt™ helps reduce side effects of solvents on products and demonstrates better adhesion to hard carton and especially recycled cardboard.

Moreover, the adhesive remains on the tape carrier so that the tape can be removed from the carton before recycling, without any traces.

### Tapes Reinforced with a Special Filament

If you need higher strength and cohesion than traditional box sealing tapes can offer - for example if you need to close very heavy boxes, reinforce metal coils, tie up cables, secure doors, or even reinforce goods piled up on a pallet, choose 3M™ filament reinforced tapes.
